STAFF MODULE – MOBILE APPLICATION

Precondition: The owner has created the branch staff account, it is active, and it is assigned to one branch.

Postcondition: The staff member is signed in and the Staff POS screen of the assigned branch is open.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)
ST-LOG-01	Staff Login and Branch Account Access	As a branch staff member	I want to log in with the credentials assigned to my branch account	I can start the day's sales and inventory work for my own branch only

Precondition: The staff member has logged in successfully on the current calendar day.

Postcondition: The session stays active until the end of the calendar day; the next day the staff member must log in again.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)

STAFF MODULE – MOBILE APPLICATION

ST-SES-01	Daily Login Session and Inactivity Lock	As a branch staff member	I want to stay logged in for the whole business day and be asked for the password only after a period of inactivity	I can keep serving customers quickly without repeated logins while the shared phone stays protected

Precondition: The staff member is logged in and has an active session.

Postcondition: The selected function screen is open and the menu is closed.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)
ST-NAV-01	Staff Navigation Menu	As a branch staff member	I want a navigation menu that lists every function available to my branch account	I can move between POS, inventory, and recording screens in one or two taps

STAFF MODULE – MOBILE APPLICATION

Precondition: The staff member is logged in. The owner has configured the menu and prices.

Postcondition: The current order holds the selected items and total. No sale is recorded and no inventory is deducted.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)
ST-POS-01	POS – Take Customer Order	As a branch staff member	I want to tap menu items to build a customer's order and see the running total	I can take orders quickly at the counter with minimal typing

Precondition: The current order contains at least one item.

Postcondition: Payment details are captured for review. No sale is recorded and no inventory is deducted yet.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)

STAFF MODULE – MOBILE APPLICATION

ST-POS-02	POS – Payment Details	As a branch staff member	I want to enter the payment received and see the change to give	the sale record has correct payment information and I give the right change

Precondition: The order has at least one item and valid payment details.

Postcondition: Either the sale is saved with a unique transaction reference, or the order is cleared with nothing recorded.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)
ST-POS-03	POS – Review and Confirm Transaction	As a branch staff member	I want to review the whole order and then confirm or cancel it	only correct, completed orders are recorded as sales

STAFF MODULE – MOBILE APPLICATION

Precondition: The staff member confirmed the transaction and the sale was saved.

Postcondition: The sale is recorded with a unique reference and the inventory consumption has been triggered.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)
ST-POS-04	POS – Sale Completed	As a branch staff member	I want to see confirmation and the unique transaction reference after the sale is recorded	I can be sure the sale is saved and can trace it later

Precondition: The staff member is logged in. The owner has configured products.

Postcondition: The menu and product details are displayed read-only.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)

STAFF MODULE – MOBILE APPLICATION

ST-MNU-01	View Menu and Product Information	As a branch staff member	I want to view the menu, prices, and availability set by the owner	I can answer customer questions and know which products I can sell

Precondition: The staff member is logged in. Inventory items exist for the assigned branch.

Postcondition: The branch's expected inventory is displayed read-only.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)
ST-INV-01	View Branch Inventory	As a branch staff member	I want to view the ingredient and supply records of my branch with their stock status	I can check what is available and what is running low during service

STAFF MODULE – MOBILE APPLICATION

Precondition: The staff member is on the Branch Inventory screen and taps an item.

Postcondition: The item’s details are displayed read-only.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)
ST-INV-02	Ingredient Details	As a branch staff member	I want to open an item to see its stock status, minimum level, and expiration batches	I can decide what to use first and what to report to the owner

Precondition: A sale has been confirmed and recorded. Recipes are configured by the owner.

Postcondition: A Sales Consumption record is saved under the sale’s transaction reference and expected inventory is reduced.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)

STAFF MODULE – MOBILE APPLICATION

ST-CON-01	Automatic Ingredient Consumption	As a branch staff member	I want ingredient consumption to be deducted automatically after each completed sale	expected inventory stays accurate without manual encoding of every sale

Precondition: The owner has configured the batter recipe. Raw ingredients have expected stock.

Postcondition: The batch is saved, raw ingredients are deducted, and +5 prepared batter bottles are available.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)

STAFF MODULE – MOBILE APPLICATION

ST-BAT-01	Prepared Batter Batch Recording	As a branch staff member	I want to record the preparation of one batter batch	raw ingredients are deducted once and the prepared batter is tracked as bottles

Precondition: The staff member is logged in. The received item exists in the inventory of the assigned branch.

Postcondition: The Stock-In record is saved, the item's expected quantity is increased, and the record appears in Transaction History.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)

STAFF MODULE – MOBILE APPLICATION

ST-STIN-01	Record Stock-In	As a branch staff member	I want to record newly received ingredients and supplies	the expected inventory stays accurate when new stock arrives

Precondition: The staff member is logged in. The item exists in the assigned branch and has available stock.

Postcondition: The Stock-Out record is saved with its reason, the expected quantity is reduced, and the record appears in Transaction History.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)

STAFF MODULE – MOBILE APPLICATION

ST-STOUT-01	Record Stock-Out	As a branch staff member	I want to record inventory removed for reasons other than sales	the expected inventory stays accurate and removals can be traced

Precondition: The staff member is logged in. The affected item exists in the assigned branch.

Postcondition: The loss record is saved with its category, the expected quantity is reduced, and the record appears in Transaction History.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)
ST-WST-01	Record Waste and Spillage	As a branch staff member	I want to record ingredients that were wasted, spilled, or spoiled, with the reason	known losses are tracked and the expected inventory stays accurate

STAFF MODULE – MOBILE APPLICATION

Precondition: The staff member is logged in. The owner has set minimum stock levels and the expiration alert period.

Postcondition: The current alerts of the assigned branch are displayed.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)
ST-ALR-01	Low-Stock and Expiration Alerts (FEFO)	As a branch staff member	I want to see alerts for low-stock, out-of-stock, near-expiration, and expired items of my branch	I can report shortages and use or discard ingredients before they spoil

Precondition: The staff member is logged in. Expected quantities exist for the assigned branch.

Postcondition: The physical inventory record is saved; expected inventory is not changed.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)

STAFF MODULE – MOBILE APPLICATION

ST-CNT-01	Physical Inventory Count	As a branch staff member	I want to enter the actual physical count of an item and see how it differs from the expected quantity	inventory errors are found early and the stock audit is completed faster

Precondition: A physical inventory count differs from the expected quantity.

Postcondition: The discrepancy is submitted with status “Pending Review”; inventory is not adjusted.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)
ST-DSC-01	Inventory Discrepancy Reporting	As a branch staff member	I want to add an explanation to a discrepancy and send it to the owner for review	the owner is informed of differences and inventory is adjusted only with authorization

STAFF MODULE – MOBILE APPLICATION

Precondition: The staff member is logged in. The branch has inventory and count records.

Postcondition: The selected report is displayed read-only.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)
ST-RPT-01	Branch Inventory Reports	As a branch staff member	I want to view basic inventory reports of my branch	I can check quantities, stock status, and counts at a glance

Precondition: The staff member is logged in. Transactions exist for the assigned branch.

Postcondition: The matching transactions are displayed read-only.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)

STAFF MODULE – MOBILE APPLICATION

ST-TXN-01	Inventory Transaction History	As a branch staff member	I want to review the inventory transactions recorded for my branch	I can verify previous entries and trace stock changes

Precondition: The staff member is logged in.

Postcondition: The branch account information is displayed read-only.

No.	Epic	Persona (User)	I want to (action)	So that (benefit)
ST-PRF-01	Staff Profile	As a branch staff member	I want to view the branch account information and my assigned branch	I can confirm I am signed in to the correct branch account

Precondition: The staff member is logged in.

Postcondition: The session ends and the Login screen is displayed.

STAFF MODULE – MOBILE APPLICATION

ST-LGO-01	Staff Logout	As a branch staff member	I want to log out of the app	the branch account stays secure on the shared device

STAFF MODU

Precondition: T

Postcondition:

No.	Acceptance Criteria (System Requirements)
ST-LOG-01	1. The Login screen shows the TakoSync logo and app name at the top, an “Email” field, a “Password” field with a Show/Hide (eye) icon, and a full-width “Log In” button; no navigation menu is shown. 2. The Password field masks the characters by default; tapping the eye icon shows the text (e.g., “Tako#Br1”) and tapping it again masks it. 3. The staff member enters the branch ID or email (e.g., BR1-STAFF or branch1@gelos.test) and password, then taps “Log In”; the button shows a loading indicator and is disabled until a response arrives so it cannot be submitted twice. 4. If the ID/Email is blank, login is blocked, the field is outlined in red, and “Please enter your ID or email.” appears under it; if the password is blank, login is blocked with “Please enter your password.” Both messages can appear together. 5. If the credentials are invalid (e.g., BR1-STAFF / wrong123), the system shows one generic message, “Invalid ID/email or password. Please try again.”, without revealing which entry was wrong; the ID/Email entry is kept and the password is cleared. 6. If the branch account has been deactivated by the owner, login is refused and an inline message “This account is inactive. Please contact the owner.” is shown. 7. If the credentials are valid, the system verifies the branch linked to the account and restricts the whole session to that branch only (e.g., BR1-STAFF can open Branch 1 records only). 8. After successful login, the system opens the Staff POS screen directly (not a dashboard), with the branch name (e.g., “Branch 1”) in the top bar and an empty order panel. 9. The system records the branch account, login date/time, and session start for audit purposes; the audit record identifies the branch account, not an individual staff member. 10. Credentials are sent over a secure connection (HTTPS/TLS); passwords are never stored or shown as plain text except while the Show/Hide icon is toggled on.

STAFF MODU

ST-SES-01	1. A successful login starts a session that remains valid until the end of the same calendar day (11:59 PM). 2. While the session is active, closing, minimizing, or force-closing and reopening the app opens the Staff POS directly without showing the Login screen. 3. If there is no active session for the current day when the app opens, the Login screen is shown instead of any protected screen. 4. After 30 minutes without interaction, a full-screen “Locked” overlay appears showing the branch name, a Password field with Show/Hide icon, an “Unlock” button, and a “Log Out” link; all branch data behind it is hidden. 5. Entering the correct branch password and tapping “Unlock” removes the overlay and returns the staff member to the exact screen and state they left (e.g., the order in progress on the POS). 6. If the password entered on the lock overlay is wrong, “Incorrect password. Please try again.” is shown, the field is cleared, and the overlay stays. 7. Tapping “Log Out” on the overlay ends the session and opens the Login screen. 8. At the end of the calendar day the session expires automatically; on the next open or interaction the Login screen appears with the message “Your session has expired. Please log in again.” 9. After expiry or logout, pressing the device Back button does not reopen protected screens or show inventory or sales data.

No.	**Acceptance Criteria (System Requirements)**
ST-NAV-01	1. Every main staff screen has a top bar with a hamburger icon on the left and the branch name (e.g., “Branch 1”); tapping the icon opens a navigation drawer that slides in from the left over a dimmed background. 2. The drawer header shows the TakoSync logo, the assigned branch name, and the branch account ID (e.g., BR1-STAFF). 3. The drawer lists, in this order, each with an icon and label: POS, Menu and Product Information, Branch Inventory, Batter Batch, Stock-In, Stock-Out, Waste and Spillage, Alerts, Inventory Count, Inventory Reporting, Transaction History, Profile and Logout. 4. The item of the current screen is highlighted. 5. “Alerts” shows a numeric badge with the number of active alerts of the branch (low stock, out of stock, near expiration, expired); the badge is hidden when the count is 0 and updates after every saved stock or sale record. 6. Tapping a menu item closes the drawer and opens the matching screen; tapping the dimmed background or pressing Back closes the drawer without navigating. 7. The drawer contains no owner functions and no items for other branches.

No.	Acceptance Criteria (System Requirements)
ST-POS-01	1. The POS screen shows the top bar (hamburger icon, branch name), category tabs “Flavors | Combos | Add-ons” below it, a two-column grid of product cards, and a bottom order bar with item count, running total, and a “Proceed to Payment” button; tapping the bar expands the full order panel. 2. Each product card shows the product name, size (4 pcs, 8 pcs, or 10+1 pcs), price in ₱ (e.g., “Octobits Takoyaki 4 pcs ₱49”), and an Available/Unavailable tag. 3. Tapping an available card adds one unit to the order (e.g., “Octobits 4 pcs x1 ₱49”); tapping the same card again increases the quantity (x2, subtotal ₱98). Selecting a product only adds it to the order — it never completes a sale or deducts inventory. 4. Each order line shows name and size, a quantity stepper (− / +), subtotal, and a trash icon; “+” increases the quantity by 1, “−” decreases it by 1 (disabled at 1), and the trash icon removes the line immediately. 5. The order summary and total recalculate instantly after every change (e.g., Octobits 4 pcs x2 ₱98 + Cheese 8 pcs x1 ₱89 = Total ₱187). 6. Unavailable products are greyed out with an “Unavailable” tag; tapping one shows the message “This item is currently unavailable.” and does not add it to the order. 7. When the order is empty, the order bar shows “No items yet” and ₱0; tapping “Proceed to Payment” is blocked and shows “Please add at least one item to the order.” 8. Product names, sizes, prices, and availability always reflect the owner’s latest configuration. 9. With at least one item in the order, tapping “Proceed to Payment” opens the Payment screen.

Postcondition:

No.	**Acceptance Criteria (System Requirements)**
ST-POS-03	1. The Review Order screen is read-only and shows every item with quantity, unit price, and subtotal, the total, the payment method, cash received, and change. 2. The screen has a primary “Confirm Transaction” button, a secondary “Cancel Order” button, and a back arrow to Payment. 3. On “Confirm Transaction”, the system checks that the order is not empty and that every item is still available; if an item became unavailable, the transaction is blocked with “[Item] is no longer available. Please update the order.” and the POS opens with that line highlighted. 4. If valid, the buttons are disabled with a loading indicator and the system saves the sale with branch, branch account, date/time, items, total, payment details, and a unique transaction reference; a double tap sends only one submission. 5. Tapping “Cancel Order” opens the dialog “Cancel this order? All items will be removed.” with “Keep Order” and “Cancel Order”. 6. Confirming the cancellation clears the order and opens an empty POS; no sale is recorded, no transaction reference is used, and no ingredients are deducted. “Keep Order” closes the dialog. 7. Cancelled, abandoned, or uncompleted orders never deduct ingredients. 8. If saving fails (e.g., no connection), “Unable to save the transaction. Please try again.” is shown with a “Retry” button; retrying reuses the same transaction reference so no duplicate sale or deduction can occur.

Postcondition:

No.	Acceptance Criteria (System Requirements)

STAFF MODU

ST-CON-01	1. The calculation starts only after a sale is confirmed and saved; cancelled, abandoned, or uncompleted orders never trigger it. 2. The system retrieves the completed sale and the products and quantities sold (e.g., Cheese Takoyaki 4 pcs x2 = 8 pieces). 3. It retrieves the current owner-configured recipe of each product and calculates the expected consumption (e.g., Cheese cubes −8 pcs, prepared batter −8 pieces, other ingredients per recipe). 4. It deducts the result from the branch's expected inventory (e.g., Cheese cubes 120 → 112 pcs); the new quantity is visible on Branch Inventory right after. 5. Batter consumption is taken from the prepared batter inventory using the configured yield; the raw batter ingredients (flour, dashi, eggs, soy sauce, salt, baking powder) are not deducted again. 6. The consumption is saved as "Sales Consumption" under the sale's transaction reference, separate from Stock-Out, Waste, and Spillage, and appears in Transaction History with its own type tag. 7. Processing the same transaction reference again never causes a second deduction. 8. Sauce is not deducted per sale unless the owner has configured a standard sauce quantity per serving. 9. If the inventory update fails after the sale is saved, the sale stays recorded, the update is flagged for retry or review, and the staff member sees the amber banner on the Sale Completed screen. 10. Recipe changes apply only to future sales; previously saved Sales Consumption records are never rewritten.

STAFF MODU

ST-STOUT-01	1. “Stock-Out” opens from the drawer with a form: Ingredient/Item (searchable dropdown of the branch’s items showing current expected quantity), Quantity Removed, Reason (dropdown), Date (default today), and Remarks (optional); required fields carry a red asterisk; “Save” and “Cancel” buttons at the bottom. 2. A helper note states “For removals not caused by sales. Use Waste and Spillage for losses.” so Stock-Out stays separate from Sales Consumption, Waste, and Spillage. 3. The Reason dropdown offers “Returned to supplier” and “Other”; selecting “Other” makes Remarks required. 4. If a required field is empty, “Save” is blocked and “Please complete all required fields.” is shown. 5. If the quantity is 0, negative, or not a number, it is rejected before recording with “Quantity must be greater than zero.” 6. If the quantity is greater than the expected quantity, “Quantity cannot exceed the expected quantity (100 pcs).” is shown and the record is not saved. 7. On valid “Save”, the system saves the Stock-Out and reduces the expected quantity (e.g., Packaging 100 → 90 pcs). 8. A success message appears and the form resets; the record shows in Transaction History with the “Stock-Out” tag, reason, and remarks. 9. Low-stock and out-of-stock alerts update automatically after the save.

ST-WST-01	1. “Waste and Spillage” opens from the drawer with a form: Ingredient/Item (searchable dropdown), Quantity (with unit), Reason/Category, Date (default today), and Remarks (optional); “Save” and “Cancel” buttons at the bottom. 2. The Reason/Category selector offers Waste, Spillage, Spoilage, and Other; selecting “Other” makes Remarks required. 3. If a required field is empty, “Save” is blocked, the field is outlined in red, and “Please complete all required fields.” is shown. 4. If the quantity is 0, negative, or not a number, “Quantity must be greater than zero.” is shown and the record is not saved. 5. If the quantity is greater than the expected quantity, “Quantity cannot exceed the expected quantity.” is shown and the record is not saved. 6. On valid “Save”, the system deducts the quantity from the expected inventory (e.g., Takoyaki sauce 60 ml, Spillage: expected quantity −60 ml). 7. A success message appears and the form resets; the record shows in Transaction History with the chosen tag (Waste, Spillage, or Spoilage) and its remarks. 8. Waste and Spillage records stay separate from Stock-Out and Sales Consumption. 9. The system never classifies an unexplained inventory difference as waste automatically.

No.	Acceptance Criteria (System Requirements)
ST-ALR-01	1. “Alerts” opens from the drawer (with its badge count) and shows four tabs — Low Stock, Out of Stock, Near Expiration, Expired — each with a count. 2. Low Stock lists items whose expected quantity is at or below the minimum and above 0; each card shows ingredient, expected quantity, and minimum level (e.g., “Takoyaki sauce 360 ml · Min 400 ml”). 3. Out of Stock lists items with an expected quantity of 0 (e.g., “Cheese cubes 0 pcs”). 4. Near Expiration lists batches within the owner-set alert period (e.g., Eggs exp. 2026-12-05 appears from 2026-11-28 with a 7-day period); cards show ingredient, batch, quantity, expiration date, and days left. 5. Expired lists recorded batches past their expiration date (e.g., Mayonnaise batch exp. 2026-11-20 shown as “Expired” on 2026-11-25). 6. Batches are ordered by earliest expiration date first and the first batch carries a “Use first” label (FEFO). 7. Tapping a card opens Alert Details with the ingredient, branch, expected quantity, minimum level, batches with expiration dates, and the note “Alerts are for information only. Purchasing decisions are made by the owner.” 8. Alerts update automatically after every stock-in, stock-out, waste, sale consumption, or authorized adjustment, and the drawer badge updates with them. 9. Only the alerts of the assigned branch are shown. 10. A tab without alerts shows “No active alerts.”

STAFF MODU

ST-CNT-01	1. “Inventory Count” opens from the drawer with a searchable “Select item” list of the assigned branch’s items. 2. After an item is selected (e.g., Eggs), the screen shows the item name, unit, and the “Expected quantity” (e.g., 25 pcs) as read-only. 3. The “Actual Count” field accepts numbers zero or greater with the unit shown as a suffix; a blank, negative, or non-numeric entry blocks submission with “Please enter a valid count.” 4. The “Difference” (actual − expected) updates as the staff member types, with a result tag: “Matches expected” (green) for 25, “Lower than expected” (red, −1) for 24, “Higher than expected” (amber, +1) for 26. 5. “Submit Count” becomes enabled once the entry is valid; tapping it saves a physical inventory record with item, expected quantity, actual quantity, difference, branch, date/time, and branch account. 6. Submitting a count never changes the expected inventory quantity. 7. If the count matches, a confirmation “Count saved. Matches expected quantity.” appears and the screen returns to the item list. 8. If the count differs, the system creates a discrepancy record and opens the Inventory Discrepancy Report screen (ST-DSC-01). 9. The count appears in Transaction History as “Physical Inventory Count”; a saved count cannot be edited, and a new count creates a new record.

Precondition: A

Postcondition:

No.	Acceptance Criteria (System Requirements)
ST-DSC-01	1. The Inventory Discrepancy Report screen opens automatically after a count that differs, with a read-only summary card: item, expected quantity, actual quantity, difference (e.g., −1 in red), branch, date/time (e.g., 2026-11-25 20:45), and submitting branch account (e.g., BR1-STAFF). 2. A discrepancy record is created only when the counted quantity differs from the expected quantity, never when it matches. 3. A multi-line “Staff remarks / explanation” field is optional (e.g., “1 egg cracked, not recorded earlier”). 4. A “Submit for Owner Review” button saves the remarks and submits the record; its status tag changes to “Pending Review” (amber). 5. After submission, “Discrepancy submitted for owner review.” appears and the app returns to Inventory Count. 6. Pressing Back before submitting opens the prompt “Submit this discrepancy for owner review?” with “Submit Now” and “Stay”, so a discrepancy cannot be left unsubmitted. 7. The system does not adjust inventory automatically and the expected quantity stays unchanged until the owner authorizes an adjustment. 8. The system does not classify the difference as waste or assume its cause. 9. The submitted discrepancy appears for the owner as “Pending Review” with the branch account that submitted it; staff cannot edit it afterward.

No.	Acceptance Criteria (System Requirements)
ST-RPT-01	1. “Inventory Reporting” opens from the drawer and lists six report cards with an icon and a one-line description: Total Ingredient Quantity, Ingredient Category Summary, Ingredient Stock Status, Branch Inventory Summary, Inventory Discrepancy, Physical Inventory Count. 2. Tapping a card opens the report view with a back arrow, report title, branch name, an “as of” date/time, and a table with unit labels that scrolls horizontally when needed. 3. Total Ingredient Quantity shows each ingredient’s total expected quantity with unit. 4. Ingredient Category Summary groups ingredients under category headers (e.g., Dry goods, Condiments) with each quantity, unit, and item count per category; quantities are never summed across different units. 5. Ingredient Stock Status shows each ingredient with “Normal”, “Low Stock”, or “Out of Stock”. 6. Branch Inventory Summary shows the branch’s ingredients, quantities, and units. 7. Inventory Discrepancy shows item, expected, actual, difference, branch, date/time, submitting account, remarks, and status. 8. Physical Inventory Count shows counted items with expected vs. actual and a Matches/Lower/Higher result. 9. Reports show only the assigned branch and the latest saved records; an empty report shows “No records to display.”

STAFF MODU

ST-TXN-01	1. “Transaction History” opens from the drawer with a top bar, a row of type chips, and a date range filter. 2. The chips are All, Stock-In, Stock-Out, Sales Consumption, Waste, Spillage, Physical Inventory Count, and Authorized Adjustment; selecting a chip filters the list. 3. The date filter opens a date range picker (e.g., 2026-11-01 to 2026-11-25) and works together with the type chip. 4. The list is sorted newest first; each row shows a color-coded type tag, item, signed quantity with unit, and date (e.g., “Stock-In · Takoyaki sauce · +720 ml · 2026-11-25”). 5. Sales Consumption and Stock-Out rows carry different tags so they are never mixed. 6. Tapping a row opens Record Details: reference, type, item, quantity, reason or remarks, date/time, branch account, and the related sale reference for Sales Consumption. 7. If no record matches the filters, “No transactions found.” is shown. 8. The staff member can view but never edit or delete records; records of other branches are not accessible. 9. The list loads within 3 seconds under standard mobile network conditions and loads more rows when scrolled to the end.
